

METHOD OF DRIVING PRINT HEAD IN INKJET PRINTER, AND INKJET PRINTER

Abstract of **WO 0139981 (A1)**

An inkjet printer (100) having a plurality of nozzles which discharge droplets of ink to cause them to land on paper (P), which landing results in dots recording information including characters and/or images. The inkjet printer (100) includes a line head (120) having a driving element which causes droplets of ink to be discharged from the nozzles, wherein the line head (120) is driven in such a manner that the same location on the paper (P) is scanned only once for single printing, one or a plurality of droplets of ink being used for forming a single dot, the diameter of the dot being varied by the number of droplets of ink.
